

Bistouri

Log every cut.

ANDROID

Bistouri on your Android phone

Bistouri is a surgical case log for McGill residents. There's no Android app in the Play Store yet, but Bistouri for the web does the same job. It runs in Chrome, installs on your home screen like an app, and uses the same account and cases as the iPhone app.

Get set up in 5 minutes

Open Bistouri in Chrome

1

Scan the code with your phone camera, or type steadyhandsoftware.com/apps/bistouri/log into **Chrome**.

Use Chrome. Other browsers may not offer to install it on your home screen.

Bistouri for the web

2

Sign in with your McGill email

Enter your @mcgill.ca or @mail.mcgill.ca address and tap **Email me a code**. Type in the 6-digit code from the email. You never need a password.

No code after a couple of minutes? Check your Junk or Clutter folder, then tap Resend code. If your program director invited you with another address, use that one.

3

Put it on your home screen

In Chrome, tap the **:** menu, then **Add to home screen** and **Install**. If Chrome shows an **Install app** banner, you can tap that instead. Bistouri then opens from its own icon, full screen, like any other app.

Touch and hold the Bistouri icon for a Log case shortcut.

4

Pick your program and PGY year

This loads your program's own procedure list, roles and targets. Cardiac Surgery and Vascular Surgery are open now. Add your name so your program director can see your progress.

5

Log your first case

On the **Cases** tab, tap **+ Log case**. Pick the site, your role and the procedure, tick the steps you did yourself, then tap **Save case**.

Use + and – to count repeated steps, such as three distal anastomoses.

Make it a habit

Log the case right after you scrub out, while you still remember who did what. It takes less time than writing it down for later.

● Logging

- Search for a procedure by name or shorthand (e.g. "CABGx3")
- Tap **Repeat** to start a copy of your last case
- Star the procedures you do most so they sit at the top under Favourites
- Tap ... on a case to edit, duplicate or delete it
- When you log a case, Bistouri suggests the EPAs it could count toward

● Progress

- Your totals against your program's minimums
- Totals by category, your top tasks and your weekly streak
- Achievements. Major ones are announced to your program (you can make them anonymous in Settings).

No patient identifiers, ever

Never enter a patient's name, MRN, health card number or date of birth in any field. The web version has no private note field. If you need one, it's in the iPhone app only.

| Good to know

- **No signal in the OR?** Once you've opened Bistouri with signal, you can log offline. The case is saved on your phone and syncs when you're back online.
- Settings → **Export cases to Excel** gives you a copy of everything you've logged.
- It also works in any browser on a computer, with the same sign-in.

- Switching to an iPhone later? Install Bistouri from the App Store and sign in. Your cases are already there.
- Bistouri is a self-reported educational log. It doesn't replace your program's official records.
- You can delete your account and all your cases at any time in Settings.

| Questions or ideas

Email

Missing procedure, wrong task, a bug or an idea? Write to **support@steadyhandsoftware.com**. Tell me it's on Android, it helps.

Your program director

Your program director sets your procedure list and targets, and can invite residents who don't have a McGill address.

Happy logging.

David Drullinsky
